Project Title: High School Musical 2 Website

I want this website to have multiple pages with a navigation menu along the left side that is visible on all pages and includes the following headings:

- **About**
  - This will be the home page that provides a brief overview of the storyline and characters as established by the first High School Musical movie. Milestones in terms of reception can also be included concisely in this introduction to the site.
- **Plot**
  - The plot description can be interspersed with images or embedded clips from the movie.
- **Cast**
  - This page can simply have photos of the main cast with corresponding names of the actors and characters.
- **Soundtrack**
  - It would probably be helpful for this page to include links to each song and/or a Spotify playlist of the soundtrack.
- **Reception**
  - Both the reception and awards sections of the Wikipedia page can be here.
- **Sources**
  - This will include the Wikipedia article itself and any media sources used.
